Gabriel Vega

Senior Software Engineer

gaveho@gmail.com • 407-495-7239
https://www.linkedin.com/in/gaveho/
Bloomingdale, Illinois

Senior Frontend Engineer with 14+ years of experience designing, delivering, and modernizing enterprise-grade UI applications for banking, fintech, and regulated environments. Owns the full delivery cycle, from Angular/Next.js frontends to NestJS, Node.js, Java, and .NET backends, through cloud-native deployments on Azure and GCP. Proven track record shipping customer-facing products, designing APIs and microservices, and building scalable, secure solutions in high-performance, mission-critical environments.

Areas of Excellence

Angular & Frontend Architecture | Cloud-Native Delivery | AI-Augmented & Conversational UIs
API Design & Integration | Micro-Frontends & Component Design Systems | Performance & Accessibility
CI/CD & DevOps | Technical Leadership & Mentorship | Problem-Solving & Troubleshooting

Professional Experience

Aequilibrium 09/2025 - Present

Senior Frontend Developer

As a Senior Frontend Engineer, I help banks get the most from **Backbase** web products by delivering tailored, production-ready banking applications. I assess end-to-end platform needs, from UI customization and custom component development in **Angular** and **TypeScript** to API integration and backend configuration, selecting out-of-the-box capabilities where they fit and engineering custom solutions when they don't. Recent clients include **Wings CU** and **UFCU (University Federal Credit Union)**, covering the Backbase Retail, Employee, and Retail Onboarding apps.

Stack: **Angular 21**, Backbase.io, Keycloak, Docker, Azure DevOps

Snapchat 10/2024 - 06/2025

Senior Software Engineer

Worked as a Full Stack Developer within the People Tech organization, building an AI-powered Slack assistant that streamlined HR workflows, improved manager responsiveness, and made internal people information easier to access across the company. The platform combined conversational AI, workflow automation, and knowledge retrieval to deliver fast, context-aware support directly inside Slack.

- Designed and built an internal Slack-based AI assistant integrated with **IBM Watson Assistant** and **ChatGPT** to answer employee and manager questions at scale, including HR policies, internal contacts, office details, employee location, and other workforce-related information.
- Extended the platform beyond conversational flows by enabling file- and knowledge-based retrieval experiences inside Slack, allowing users to get grounded answers from internal content.
- Developed **Node.js** backend services to support proactive Slack notifications, approval reminders, and intelligent nudges for expense approvals and other HR workflows.

- Enhanced the assistant with layered conversational logic and retrieval-driven responses, improving answer quality, reducing manual support dependency, and increasing employee self-service.
- Deployed microservices on **Google Cloud Run** and **App Engine**, using **Secret Manager** for secure configuration and credentials handling.
- Leveraged **Firebase**, **BigQuery** and **Spanner** for scalable analytics, transactional integrity, and data-backed workflow orchestration.
- Contributed to more efficient workforce operations by building scalable internal tooling that combined AI assistance, automation, and enterprise-ready cloud architecture.

Stack: **Angular 19**, Node.js, Docker, GCP

84.51 ˚ 05/2024 - 10/2024

Senior Software Engineer

As a Full-Stack Engineer on the Stratum team, I leveraged **Angular** and **Java Spring Boot** to build and own a comprehensive analytics platform that merges customer behavior insights with retail performance metrics. Led end-to-end development across the stack, from data-driven UI components to backend service design, delivering high-performance applications that directly supported strategic business decisions.

Stack: **Angular 16/17**, Java/SpringBoot 3, Azure DevOps

Backbase 06/2021 - 04/2024

Senior Frontend Engineer

Led the integration and customization of **Backbase** web products as part of the Customer Success Department, delivering tailored solutions for banking applications. Worked closely with banks and financial institutions to assess OOTB (Out of the Box) capabilities vs. custom implementations, ensuring seamless platform integration and system communication. A couple of customers were BNP, Wings CU, Blue FCU, Ent CU

Configured and customized **Backbase** banking applications for Retail, Business, Onboarding, Employee App, implementing custom features when required using **Angular, TypeScript, HTML,** and **SCSS**.

- Collaborated with cross-functional teams (business analysts, solution architects, backend and frontend developers, CI/CD engineers, and QA) to deliver high-quality, scalable banking solutions.
- Consulted with internal development teams within banks, addressing technical inquiries related to Backbase products, system integrations, and API communication.
- Deployed and maintained applications as Docker containers in **AWS** and Azure environments, ensuring high availability and scalability across multiple environments.
- Implemented Agile development practices, including sprint planning, daily stand-ups, sprint reviews, technical refinements, and demos to enhance team productivity and project success.
- **Led internal initiatives** within the Frontend Engineering chapter, including:
    - Developing a **customized mock server** using **Node.js** and **Angular** for efficient testing and development.
    - Building a POC for an **AI-driven chatbot** using **OpenAI ChatGPT**, assisting developers in troubleshooting common frontend issues.

Stack: **Angular 11-15**, Docker, AWS, Azure DevOps

Lexicon Networks 05/2018 - 05/2021

Software Consultant

Played a pivotal role in the development of the ZestMama.com platform, which involved creating front-end applications for restaurant owners and customers using Angular Framework, a web-widget for restaurants' website as well as backend integrations using **Node.js**. Worked extensively with APIs such as **Twilio SMS** API, **Converge Pay**, and **IBM Watson Assistant**.

- Spearheaded the design, development, and deployment of **IBM Watson Assistant** chatbots, providing an innovative and interactive solution for customers.
- Engineered frontend applications tailored to the needs of restaurant owners and customers, enhancing user experience and operational efficiency. Exhibited proficiency in **Node.js** and **Angular** to deliver high-quality software solutions.
- Spearheaded the creation of the zestmama.com service, resembling Doordash/Uber Eats but without a mobile app, where customer interaction is managed via SMS or Web widget chatbot.
- Developed the Watson conversation, Web widget for restaurant integration, Angular web-apps for both customer and restaurant management, and Backend systems for IBM Watson API, Twilio SMS API, Converge Payment Gateway, and MongoDB integration.

Stack: **Angular 8/10**, Node.js, Digital Ocean

Freelance 10/2016 - 04/2018

Software Engineer

Developed a transactional mobile application using **IONIC & Firebase** technology as a part of freelance software engineering projects. Integrated a REST API with a SOAP API leveraging Java/Apache Camel for efficient data exchange and communication. Delivered high-quality software solutions as a freelance software engineer.

- Ensured smooth data exchange and communication through efficient API integration.
- Contracted with **Synergy Global Business as a Backend developer**, focusing on customizing their Banking solution.
- Specialized in integrating the product with Bank application layers, transitioning from SOAP to REST using Java and Apache Camel. Collaborated with Synergy Global Business across 4 banks during the integration process.

Synergy Global Business 06/2012 - 09/2016

Technical Lead

Led the development of projects and products at Synergy Global Business, focusing on the allocation of talent to various projects or services for both factory and aftermarket implementation. Ensured on-time delivery and quality of solutions. Took on the role of Technical Lead for mobile development, ensuring the team remained unblocked, adhered to deadlines, and maintained quality standards. As Technical Lead for Mobile, Web, and Backend development, supervised teams across these domains to ensure timely and high-quality deliverables. Facilitated resource allocation and engaged in customer meetings during pre-sale and technical refinement phases.

- Managed the development and implementation of various projects and products.
- Developed the Sales+ mobile app for Blackberry, catering to salespeople for customer order acquisition.
- Created the Android version of the Sales+ app, serving three major customers in production.

- Contributed to the design, development, and configuration of the Banking solution for over 5 customers, primarily focusing on the Backend aspect. Utilized standardized agile tools and technologies for project management.
- Customers included Banco Mercantil, Banesco, BNC, BFC, Banco Aliado, Unibank, Banco Nacional de Panamá, mostly on the Retail and Business services.

Stack: IONIC, Blackberry, Android, Node.js

Education

Bachelor in Science, Computer Science Engineering

Simon Bolivar University (Universidad Simón Bolívar)

Technical Proficiencies

Frameworks / Libraries: Angular 21, Next.js, NestJS, Node.js, IONIC, SpringBoot, .NET, Backbase.io

Languages & Databases: JavaScript, TypeScript, HTML5, CSS, Java, C, PHP, MongoDB, MySQL, Redis, Couchbase, ElasticSearch, MS SQL Server

Platforms: Git, Docker, GitHub, Microsoft Azure DevOps, GCP, Netlify, Vercel, Firebase, Keycloak, Twilio, RetellAI, Telnyx, Confluence, IBM Watson Assistant, OpenAI ChatGPT/API, Claude.ai, Supabase

Key Projects

BlueKiwi - Web Global Business 11/2024 – 04/2026

Senior Full-Stack Engineer (Freelance)

Embedded as a senior engineer with a UK specialty insurance provider, working across a portfolio of platforms supporting **real-time insurance quoting, policy issuance, and online payments**. Took ownership of features end-to-end — from architecture and design through deployment, monitoring, and production support.

- Designed and built backend services for a **real-time quoting engine** powering home and life insurance products, using event-driven streaming (Event Hubs + Stream Analytics) to deliver sub-second pricing responses and unlock faster product launches for the business.
- Delivered a **policy-issuance and online payments API**, integrating directly with the customer-facing web portal, modernizing the buying journey.
- Built and shipped Angular 21 (TypeScript, RxJS, SSR) features against the same platform, owning each story full-stack from API contract through UI, with MSAL/Microsoft Entra ID for enterprise SSO.
- Architected services using **microservices, Clean Architecture** distributed-runtime patterns, building for horizontal scale, fault isolation, and clear domain boundaries.
- Embedded **observability and quality gates** end-to-end: Application Insights for distributed tracing/metrics, Sigrid on every PR, and multi-environment (dev/uat/prod) Azure DevOps pipelines with Docker multi-stage builds.
- Worked in a highly collaborative model, pair programming, code reviews, sprint retros, and architectural discussions with product and engineering peers across time zones.

Stack: Angular 21, .NET 8/9, Azure DevOps.

Sora Video Generator**:** *Personal SaaS Project* 2025

Designed, built, and shipped a full-stack AI image-to-video SaaS end-to-end over a single weekend, leveraging Claude Code as the primary development partner. Demonstrates velocity, ownership, and modern AI-assisted engineering workflow.

- Full-stack TypeScript + Next.js 15 + React application, deployed on Vercel.
- PostgreSQL (Supabase) with Row-Level Security for multi-tenant data isolation across users, video history, and transactions.
- Stripe Checkout + signed webhooks with server-side price validation and a credit-based usage model.
- Event-driven async pipeline: n8n workflow + callback webhooks for long-running image-to-video generation jobs (OpenAI Sora 2 / Sora 2 Pro), modelled as job-id state transitions in Postgres.
- Stack: Next.js 15, React, TypeScript, Tailwind CSS v4, shadcn/ui, Supabase (PostgreSQL + Auth + Storage + RLS), Stripe, n8n, OpenAI Sora, Vercel, Claude Code.

Stack: Next.js 16, Vercel.

NeuraliticaBot: AI Chat with your files 2025

Developed NeuraliticaBot, an AI-powered platform that allows users to upload files (PDF, DOCX, CSV, images) and converse with their content in real time.

- Implemented generative AI techniques using OpenAI models and retrieval-augmented generation (RAG) to provide concise answers based on uploaded documents.
- Built a multilingual chat interface with Next.js and Tailwind CSS, secured by Supabase Auth with Google OAuth and role-based access control.
- Deployed the platform on Vercel and integrated Supabase for database and storage management.

Stack: Next.js 16, Vercel.
